

OpenEHR

OpenEHR is an open specification, for a clinical information model architecture, capable of supporting an 'open health data platform' which is both vendor and technology-neutral. Systems built on openEHR can respond directly to clinical innovation and diversity, without complex and expensive re-engineering. openEHR has been adopted by a variety of health system implementers and national organisations to underpin system development or national clinical standards programs, with proven scalability and vendor-neutrality. There is increasing interest in the deployment of openEHR-based clinical data repositories and applications alongside traditional clinical systems as a more agile and responsive partner.

eHWDC 2018

GCC eHealth Workforce Development Conference

Abu Dhabi, 27-29 November 2018

زمام
Developing
Careers in e-Health

♦ SPEAKER

Miroslav Končar

PhD, Business Development Director,
Marand d.o.o

Andraz Kozelj

Software Development Lead,
openEHR based specialized
solutions, Marand d.o.o

♦ WORKSHOP TARGET AUDIENCE:

CIOs, healthcare IT professionals, clinicians, informaticians and system implementers who are interested in the technical aspects of openEHR methodologies and future directions.

♦ LEARNING OBJECTIVES:

Understand the basics of semantic data modeling in clinical practice, with focus on both inter- and intra-operability

Explain the role of the openEHR project in supporting the mix of role, process and technology change required by modern healthcare.

Highlight openEHR implementation technologies used by differing development communities.

Inform the current state of the art of the openEHR specifications

Understand basic clinical modeling principles using Archetype Designer (ADL)

Building easy to use clinical entry forms compliant to openEHR practices

Basic understanding of Archetype query language (AQL)

♦ PRESENTED BY

openEHR

27th November 2018 | 09:00hrs to 18:00hrs

REGISTRATION FEE: USD 450
